

SILAGE RAKES

PIT BULL™
SILAGE RAKES

PITBULLBLADES.COM

A different approach to filling bunkers.

Pitbull Grass Forks and Silage Rakes are versatile tools designed to move large amounts of material across a bunker silo with minimal disruption. The best of two approaches, they work like dozer blades combined with the properties of a bucket allowing operators to not only push material across the bunk but carry it as well.

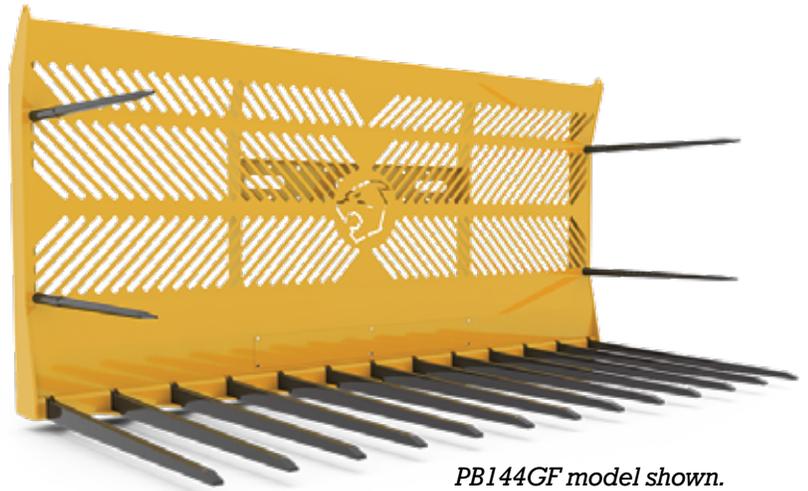

Recommended for:
100-200 HP

Weights: 1,800 to 2,100 lbs.

Grass Fork

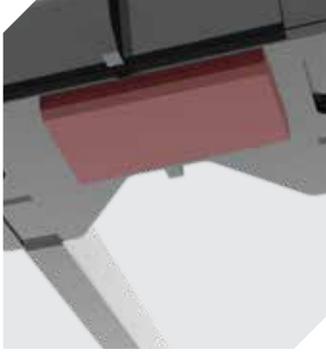

Widths 8' / 10' / 12'

PB144GF model shown.

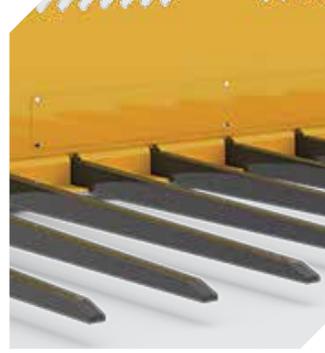

Ideal for loader applications where the dump controls can be utilized to flow material off the tines. This rigid rake is constructed with loader lift capacities in mind ensuring efficient management of each load.

Features

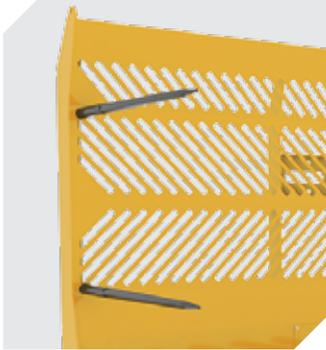

Wear Plates

AR400 wear plates take the brunt of the abrasion when running over the ground.

Tines

Easily pick up and manage material placement and are built to last with AR450 steel.

Bale Spears

Mounted inside the frame to reduce scraping the bunker walls all while helping you carry a large load.

Bolt On Lugging

For maximum compatibility almost any lugging can be easily fitted to a Pitbull Grass Fork or Silage Rake.

69"

Grass Fork Height

54.75"

Overall Depth
(without lugging)

4 Removable 49" Conus 2 Side Spears

**High Strength
Abrasion Resistant Tines**

Compatible mounts:

Weight: 2,100 lbs.

13 Tines
(54.75" long)
Tine spacing 10"

4 Spears
(49" Conus 2)

Silage Rakes

with Push Plate

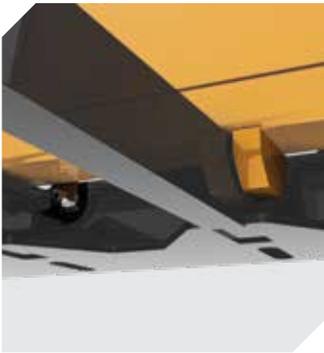

Push Plate

Ideal for 3PH mounted applications where adjustable pitch is often restricted, the push plate moves material off the tines to ensure efficient flow of material when needed the most.

Features

RL
Series

R
Series

Push Plate Guides

The push plate guides ensure smooth consistent action while the plate is being extended and retracted.

Wear Plates

AR400 wear plates take the brunt of the abrasion when running over the ground.

Push Plate

The large push plate is the heart behind the Pitbull rake. Extend it while loaded and the material drops off the tines onto the pile.

Bale Spears

Mounted inside the frame to reduce scraping the bunker walls all while helping you carry a large load.

Hydraulic

Hydraulic power passes through a 50/50 flow divider to power the two hydraulic cylinders engaging the push plate.

Tines

Easily pick up and manage material placement and are built to last with AR450 steel.

Recommended for:
100-200 HP

Weights: 2,105 to 2,702 lbs.

PB120RL model shown.

Silage Rake with Push Plate RL Series

Widths 8' / 10' / 12'

Ideal for 3PH mounted applications where adjustable pitch is often restricted, the push plate moves material off the tines to ensure efficient flow of material.

The reduced weight of these units are also ideal for loaders with limited lift capacities.

Weights: 2,739 to 3,467 lbs.

PB096R
model shown.

Pitbull Rake with Push Plate R Series

Widths 8' / 10' / 12'

The R Series shares key features with the smaller RL Series, including the large push plate, high-visibility design, and durable AR450 steel tines. However, the R Series is engineered to handle increased capacities, making full use of the horsepower available from larger tractors.
